Chemical Fabrics & Film Association Launches Newly Expanded Web Site As Resource for the Industry

CLEVELAND, Feb. 23, 2001 – The Chemical Fabrics & Film Association (CFFA) has launched its newly improved and expanded Web site offering its members, specifiers, purchasers and consumers of polymer-based sheet products comprehensive information on industry-related topics, including general product standards.

The CFFA Web site (www.chemicalfabricsandfilm.com) contains downloadable literature addressing topics such as vinyl's health, safety and environmental performance. It features performance and quality standards and specifications for a variety of products used in the aircraft, automotive, garment, graphic arts, wallcoverings, upholstery fabrics and marine industries.

Industry professionals will also find technical reports on, among others, indoor air quality, mold and mildew, and plasticizer migration. In addition to the database of CFFA's members and associate members, the Web site offers a number of links to other valuable resources, industry trade publications and chemical associations in the United States, Canada and Europe.

The library of publications is also available in hard copy upon request. General association materials, automotive/transportation, decorative and industrial product publications can be requested from the association by phone at (216) 241-7333; by fax at (216) 241-0105; or by e-mail at cffa@chemicalfabricsandfilm.com.

Chemical Fabrics & Film Association Launches Newly Expanded Web Site – *Page 2*

The Chemical Fabrics & Film Association is an international trade association representing the major manufacturers of polymer-based fabric and film products, used in the building and construction, medical, automotive and many other industries. CFFA provides education on the benefits and uses of chemical fabrics and film, and supports technical research and standards development within the industry. The organization was founded in 1927 and is based in Cleveland.
